

Press release

New DTM Collection 1/2007 available from January 2006

PACTware is the FDT technology based solution for integration of field instruments, communication components, remote I/O systems and interface components. The operation of all components is carried out via instrument drivers, so-called DTMs. These describe the hardware completely and provide a graphical adjustment interface. All instrument and communication DTMs needed for parameter adjustment of the instruments are compiled in the DTM Collection.

The new DTM Collection 1/2007 from VEGA Grieshaber KG will be released in January.

New DTM Collection 1/2007

... Page 2

New in the collection are the DTMs for VEGABAR 51, VEGABAR 63 and VEGAWELL 51 pressure transmitters as well as the DTM for the VEGADIF 55 differential pressure transmitter.

In the area of communication DTMs a new interface adapter, VEGACONNECT 4, has been introduced. It enables communication between sensors and the USB interface of laptops. Direct communication with the sensors is now possible without an RS 232 interface or additional adapter. As a result of the direct connection, it doesn't matter whether the sensors have a HART, Profibus PA or Foundation Fieldbus interface.

The DTM Collection 1/2007 also contains for the first time all DTMs in the Dutch language.

The new DTM Collection as a whole or as individual software components can be downloaded free of charge from our homepage under www.vega.com. A detailed description of the new functions as well as the version history can also be found in this directory.
