1  About this document

1.1  Function
This operating instructions manual provides all the information you need for mounting, connection and setup as well as important instructions for maintenance and fault rectification. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

1.2  Target group
This operating instructions manual is directed to trained specialist personnel. The contents of this manual should be made available to these personnel and put into practice by them.

1.3  Symbols used

- **Information, tip, note**
  This symbol indicates helpful additional information.

- **Caution:** If this warning is ignored, faults or malfunctions can result.

- **Warning:** If this warning is ignored, injury to persons and/or serious damage to the instrument can result.

- **Danger:** If this warning is ignored, serious injury to persons and/or destruction of the instrument can result.

- **Ex applications**
  This symbol indicates special instructions for Ex applications.

- **List**
  The dot set in front indicates a list with no implied sequence.

- **Action**
  This arrow indicates a single action.

- **Sequence of actions**
  Numbers set in front indicate successive steps in a procedure.

- **Battery disposal**
  This symbol indicates special information about the disposal of batteries and accumulators.
2 For your safety

2.1 Authorised personnel
All procedures described in this operating instructions manual must only be carried out by VEGA service technicians or qualified personnel that have received training from VEGA (e.g. VEGA sales partners). During work on and with the device the required personal protective equipment must always be worn.

2.2 Appropriate use
The components described in this manual are replacement components for existing sensors.

2.3 Approvals
If the instrument comes with approvals, the associated approval documents of the sensor must always be noted. They are included with the delivery but can also be downloaded under www.vega.com via "VEGA Tools" and "Instrument search" as well as via "Downloads" and "Approvals".

2.4 Environmental instructions
Protection of the environment is one of our most important duties. That is why we have introduced an environment management system with the goal of continuously improving company environmental protection. The environment management system is certified according to DIN EN ISO 14001.

Please help us fulfil this obligation by observing the environmental instructions in this manual:
- Chapter "Packaging, transport and storage"
- Chapter "Disposal"
3 Product description

3.1 Configuration

This operating instructions manual applies to the electronics modules of the following sensors from the PROTRAC series.

- FIBERTRAC

3.2 Principle of operation

The electronics module is suitable for exchange in sensors of the FIBERTRAC series. You can find information of the available versions in chapter "Mounting preparations".

3.3 Packaging, transport and storage

Packaging

Your instrument was protected by packaging during transport. Its capacity to handle normal loads during transport is assured by a test based on ISO 4180.

The packaging of standard instruments consists of environment-friendly, recyclable cardboard. For special versions, PE foam or PE foil is also used. Dispose of the packaging material via specialised recycling companies.

Transport

Transport must be carried out in due consideration of the notes on the transport packaging. Nonobservance of these instructions can cause damage to the device.

Transport inspection

The delivery must be checked for completeness and possible transit damage immediately at receipt. Ascertained transit damage or concealed defects must be appropriately dealt with.

Storage

Up to the time of installation, the packages must be left closed and stored according to the orientation and storage markings on the outside.

Unless otherwise indicated, the packages must be stored only under the following conditions:

- Not in the open
- Dry and dust free
- Not exposed to corrosive media
- Protected against solar radiation
- Avoiding mechanical shock and vibration
3 Product description

Storage and transport temperature

• Storage and transport temperature see chapter "Supplement - Technical data - Ambient conditions"
• Relative humidity 20 … 85 %
4 Mounting

4.1 General instructions

Safety during mounting

We recommend installing the replacement electronics with the instrument dismounted and brought to a suitable place, e.g. a workshop. If it is not possible to dismount the instrument, the electronics module can also be installed on site at the measuring point.

Warning:

Switch off voltage supply before starting the installation procedure. The replacement electronics may only be installed when the sensor is in a de-energised state. Non-observance will damage the electronics!

Ex approval

It is absolutely necessary that the following points are observed with sensors with Ex approval:

For sensors with Ex approval, make sure that the replacement electronics module has the same designation as the exchanged electronics module.

For example, an electronics module with a hardware version ≥ 2.0.0 must be only installed in a sensor with hardware version ≥ 2.0.0.

4.2 Mounting preparations

Assignment

The electronics modules are mounted in the electronics compartment and adapted to the respective sensor. First of all, check by means of the following lists if you are using a suitable electronics module.

In order to reach the max. possible accuracy in case of considerable length differences, it is necessary, to order the electronics module according to the sensor length.

**FIBERTRAC**

Sensor length: 305 ... 1524 mm (12 ... 60 in)

- PT30FIBER-E.AV for version 4 ... 20 mA/HART four-wire
- PT30FIBER-E.AS for version 4 ... 20 mA/HART with SIL qualification
- PT30FIBER-E.AP for version Foundation Fieldbus and Profibus PA

Sensor length: 1829 ... 3353 mm (72 ... 132 in)

- PT30FIBER-E.BV for version 4 ... 20 mA/HART four-wire
- PT30FIBER-E.BP for version Foundation Fieldbus and Profibus PA

Sensor length: 3500 ... 5182 mm (138 ... 204 in)

- PT30FIBER-E.CV for version 4 ... 20 mA/HART four-wire
- PT30FIBER-E.CP for version Foundation Fieldbus and Profibus PA

Sensor length: 5486 ... 7010 mm (216 ... 276 in)

- PT30FIBER-E.DV for version 4 ... 20 mA/HART four-wire
• PT30FIBER-E.DP for version Foundation Fieldbus and Profibus PA

Order with pre-configured electronics module

If you ordered a pre-configured electronics module (with serial number), the serial number of your sensor has already been entered in the software of the electronics module.

See also chapter "Setup".

With SIL-qualified instruments, only corresponding electronics modules with SIL qualification may be used. Furthermore, only pre-configured electronics modules (with serial number) may be used.

Electronics modules for SIL qualified instruments can only be ordered by stating the sensor serial number. Have the sensor serial number ready when ordering.

Compare the sensor serial number on the electronics module with the sensor serial number on the type label of your sensor.

Check if this sensor serial number is also displayed when switching on the instrument. The sensor serial number can be displayed in the display and adjustment module or in the adjustment software PACTware.

The electronics module is also provided with its own electronics serial number. This number is only used for internal processes.

SIL

Profibus PA

The supplied electronics module must be modified for Profibus PA instruments.

Remove the black cover foil above the two address selection switches for Profibus PA.

See the following illustration.
Coding

To prevent accidental use of a non-permissible electronics module, the terminal blocks are coded.

On the opposite side, you must code the electronics module according to your sensor.

To allow easier handling, the coded pins are mounted on a plastic plate. Two of these mounting supports are enclosed with the electronics module.

In the following illustration there is an example of a sensor coded without Ex approval (coding pin in terminal 4).

There is already a coding pin in terminal 2. This coding prevents the two terminal blocks from being exchanged.

Fig. 3: Inserted coding pin

A  Coding pin (e.g. for a sensor without approval)
You must code your sensor according to the new electronics module of your sensor.

- Terminal 3 - Sensors with Ex approval intrinsically safe (ia)
- Terminal 4 - Non-intrinsically safe sensors or sensors without approval

![Fig. 4: Coding](image)

A  Coding pin for non-intrinsically safe sensors and sensors without approval (terminal 4)
B  Coding pin for intrinsically safe (ia) instruments (terminal 3)
C  Coding pin - avoids an interchanging of the two terminal blocks (terminal 2)

To simplify handling, the small coding pins are attached to a plastic washer.

Insert one small coding pin into the dovetail guide until it snaps in. Then you can break off the mounting support.

![Fig. 5: Insert the coding pins into the electronics module](image)

A  Coding pin on mounting support

### 4.3 Installation procedure

**Caution:**

Generally inform the radiation safety office before starting work on radiation-based sensors and source containers. The radiation safety
office must also be informed when exchanging the electronics module.

Keep in mind that the following work must only be carried out after an appropriate training from VEGA.

Proceed as follows:

1. Switch off the source reliably - Set the source container to "Off"
   
   Secure radiation source from being switched on again.

   **Warning:**

   Always switch off the radiation source when working on the sensor and secure it against unauthorized or unintentional switching on.

2. Switch off power supply

   **Warning:**

   Connect only in a voltage-free state. Switch off the voltage supply reliably and secure it against unauthorized or unintentional switching on.

3. Carry out all work in a clean and dust-free environment. If possible, dismount the sensor.

   **Caution:**

   The black rubber protective cap protects the light-sensitive photomultiplier against incident light. Only remove the protective cap when you are requested to do so in this manual.

4. Check if all parts are included:
   - Optical pad
   - Plastic spatula
   - Special grease (tube)
   - Coded pins on mounting support (2 pcs.)

5. Unscrew cover (1) of the electronics compartment (5)

6. Loosen and detach the terminal blocks (6) of the old electronics module on the lateral "clamping brackets" (terminal blocks not included in the delivery)
7. Loosen the four holding screws (7) of the electronics module with a screwdriver (Torx size T 10).

8. Slowly pull out the old electronics module (2) so that the optical pad (4) can peel away from the glass window (9). During this process, the photomultiplier (8) can get stuck inadvertently in the housing. In such case, push the photomultiplier back into the electronics module. Keep the position of the plug connections inside the electronics module in mind (take note of the gap in the base and the corresponding pins).
9. The optical pad (4) can stick to the round glass window at the bottom in the housing. In this case, use a small screwdriver to remove the optical pad (4) carefully. If you have small, slender hands, you can remove the optical pad (4) using just your hands.

10. Dispose of the old optical pad (4)

11. Clean the glass window (9) at the bottom of the housing with a lint-free cloth. Do not use any cleaning agents. See following illustration.
12. Remove the 4 holding screws (7) from the old electronics module. Press the screws through the retaining clip. See the following illustration.

**Tip:**
When pushing the holding screws through, hold one finger in front of the screw head so that the screws cannot jump out and possibly get lost.

13. Insert the four holding screws (7) into the new electronics module (2)
14. Check if all parts are dry, clean and dust-free.

15. Open the attached tube of special grease (10).

16. Apply special grease (10) to one side of the new optical pad (4). See the following illustration.

![Fig. 10: Apply special grease to one side of the optical pad](image)

4 Optical pad  
10 Special grease

17. Use the edge of the plastic spatula (11) to skim the surface of the optical pad (4) so that only a wafer-thin grease film remains. See the following illustration.

![Fig. 11: Skim the surface of the optical pad with the plastic spatula](image)

11 Plastic spatula

18. Detach the protective cap with the foam rubber pad (3) from the photomultiplier (8) of the new electronics module.
Avoid exposing the photomultiplier to direct light. Detach the protective cap (3) only as the final step.

Fig. 12: Detach the protective cap with the foam rubber pad
2 Electronics module
3 Protective cap with foam rubber pad

19. Check if the photomultiplier (8) of the new electronics module is clean. If necessary clean with a lint-free cloth. See illustration.

Fig. 13: Check the photomultiplier
4 Optical pad
7 Holding screws
8 Photomultiplier

20. Place the optical pad (4) with the greased side centered to the photomultiplier (8).
   Do not press with your fingers or sharp objects.

21. Apply special grease to the second side of the optical pad. See following illustration.
22. Use the edge of the plastic spatula (11) to skim the surface of the optical pad (4) so that only a wafer-thin grease film remains. See the following illustration.

23. Insert the new electronics module (2) carefully into the instrument housing (5)

Take note of the correct direction when inserting the electronics module. The electronics module cannot be inserted the wrong way. Keep the plugs on the lower side in mind.
Fig. 16: Insert the electronics module carefully into the instrument housing.

1 Housing lid
2 Electronics module
5 Instrument housing

**Note:**
If the optical pad (4) drops out when inserting the electronics module, you have to clean the optical pad (4) carefully, grease it again, remove the grease (only a thin film should remain) and place it again onto the photomultiplier (8).

24. Press the electronics module (2) carefully down onto the plug connections.

25. Tighten the four holding screws (7)

26. Plug the already connected terminal blocks (6) carefully onto the new electronics module (2).

**Note:**
The terminal blocks are uniquely coded according to the electronics version.

If one of the terminal blocks does not fit onto the electronics module, check if you are using the right electronics module.
If the electronics module is correct, check the coding. See chapter "Mounting preparations".

27. Screw the housing cover onto the housing up to the stop and protect it against unintentional opening by screwing out the hexagon screw.

**Note:**
If the photomultiplier was exposed to strong light, this can temporarily cause measurement deviations. Therefore, as a rule, wait two hours before you put the instrument into operation.

The electronics exchange is now finished.

**SIL**
As a rule, an exchange of electronics must be documented internally if SIL qualified instruments are involved.

**Ex**
As a rule, an exchange of electronics must be documented internally if Ex applications are involved.

**Information:**
The old electronics module is not contaminated and can be disposed of as electronic scrap.
5 Setup

5.1 Setup preparations

With sensor serial number

If you ordered the electronics module by stating the sensor serial number, it is ready for the setup procedure immediately after installation and connection to power supply.

Electronics modules for SIL qualified instruments can only be ordered by stating the sensor serial number.

Without sensor serial number

If you ordered the electronics module without stating the sensor serial number or you are using a suitable electronics module from stock, you first have to load the sensor data after installation.

The sensor data also include the TAG no., information on the process fitting and seal as well as activation data for a supplementary electronics.

At www.vega.com go to "Instrument search". The order data of the sensor are displayed after entering the serial number.

Below the order data you will find "Sensor data for Service DTM" as an XML file. Save this file with "Save as" on your PC and transfer it via PACTware and the Service DTM to the sensor.

5.2 Setup steps

Parameter adjustment

If the instrument is used in the same application after the electronics exchange, the previous parameter settings of the instrument must be restored. To do this, you can use the import function of the adjustment software PACTware with the device DTMs or the copy function of the display and adjustment module.

If no copy of the parameter settings is available, you have to carry out a fresh setup. See the operating instructions of the sensor.

On SIL qualified instruments, the settings of the electronics must be checked and verified after the electronics exchange. Only then is the instrument again ready for operation.
6 Maintenance

6.1 How to proceed if a repair is necessary

You can find an instrument return form as well as detailed information about the procedure in the download area of our homepage: www.vega.com.

By doing this you help us carry out the repair quickly and without having to call back for needed information.

If a repair is necessary, please proceed as follows:

- Print and fill out one form per instrument
- Clean the instrument and pack it damage-proof
- Attach the completed form and, if need be, also a safety data sheet outside on the packaging
- Please contact the agency serving you to get the address for the return shipment. You can find the agency on our home page www.vega.com.
7 Dismount

7.1 Dismounting steps

Warning:
Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel or pipeline, high temperatures, corrosive or toxic products etc.

Take note of chapters "Mounting" and "Connecting to power supply" and carry out the listed steps in reverse order.

7.2 Disposal

The instrument consists of materials which can be recycled by specialised recycling companies. We use recyclable materials and have designed the electronics to be easily separable.

Correct disposal avoids negative effects on humans and the environment and ensures recycling of useful raw materials.

Materials: see chapter "Technical data"

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.

WEEE directive 2002/96/EG
This instrument is not subject to the WEEE directive 2002/96/EG and the respective national laws. Pass the instrument directly on to a specialised recycling company and do not use the municipal collecting points. These may be used only for privately used products according to the WEEE directive.
8 Supplement

8.1 Technical data

The technical data are listed in the operating instructions manual of the respective sensor.
8.2 Industrial property rights

VEGA product lines are global protected by industrial property rights. Further information see www.vega.com.

Les lignes de produits VEGA sont globalement protégées par des droits de propriété intellectuelle. Pour plus d’informations, on pourra se référer au site www.vega.com.

VEGA系列产品在全球享有知识产权保护。进一步信息请参见网站www.vega.com。

8.3 Trademark

All the brands as well as trade and company names used are property of their lawful proprietor/originator.
All statements concerning scope of delivery, application, practical use and operating conditions of the sensors and processing systems correspond to the information available at the time of printing.
