Take note of safety instructions for Ex applications

Please note the Ex specific safety information that you can find at www.vega.com and that comes with each instrument. In hazardous areas you should take note of the appropriate regulations, conformity and type approval certificates of the sensors and power supply units. The sensors must only be operated on intrinsically safe circuits. The permissible electrical values are stated in the certificate.

1 Measuring principle

Functional principle

An alternating electric field is generated at the tip of the measuring electrode. If the sensor is covered with medium, the capacitance of the sensor changes. This change is detected by the electronics and converted into a switching command.

Adhesions are compensated as far as possible and therefore have no influence on the measurement.

Area of application

The VEGAPOINT is a capacitive point level sensor for point level detec-

It is designed for industrial use in all areas of process technology and can be used in water-based liquids or in bulk solids.

Typical applications are overfill and dry run protection. With a the small sensor unit, VEGAPOINT can be also mounted e.g. in thin pipelines. The sensor allows use in vessels, tanks and pipes. Thanks to its simple and robust measuring system, VEGAPOINT is virtually unaffected by the chemical and physical properties of the liquid.

It also works under difficult measuring conditions such as turbulence, air bubbles, strong external vibrations or changing media. In addition, the sensor can also detect foam.

Fig. 1: VEGAPOINT

- 4 Process fitting
- 5 Sensor
- 6 Plug connection

Function monitoring

The electronics module of VEGAPOINT continuously monitors the following criteria via frequency generation:

- Failure of the signal generation
- Line break to the sensor element

If a malfunction is detected or in case of voltage supply, the electronics takes on a defined switching status, i.e. the output is open (safe state).

1.2 Application examples

Food industry - Bottle cleaning system

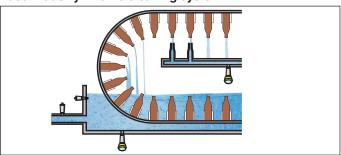

Fig. 2: Point Level detection in bottle cleaning system

Apart from the continuous level measurement, level detection is an essential safety feature for the process industry. Many modern sensors for continuous level measurement are actually approved as overfill protec-

tion system, however, a second, physically different measuring system provides the best safety and redundance.

Thanks to their manifold application possibilities, VEGAPOINT level switches are ideal for all applications in the area of liquid detection. Different electrical and mechanical versions enable simple integration into existing control systems.

Advantages:

- Coloured 360° switching status display for easy recognition of switching status
- Point Level detection also with buildup
- Various hygiene fittings available
- Highest chemical resistance even with parts that do not come into contact with the medium

Chemical industry - Condensation vessel

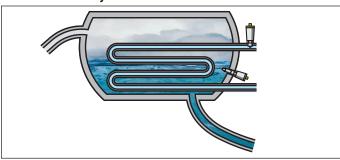

Fig. 3: Dry run protection in condensation vessel

In order to avoid overfilling or dry running of pumps, sensors for point level detection are an important safety element. The VEGAPOINT 21 point level switch is ideally suited for universal applications. Even temperatures up to +115 °C (+239 °F) and pressure ranges up to 25 bar (+363 psig) do not impair the safe function.

Due to the wide range of applications, the level switches VEGAPOINT are ideal for all measuring tasks in the field of stock-keeping of water-based liquids.

Advantages:

- High reliability
- Small mounting dimensions
- Reliable switching point with water and vapour
- Can also be used with oily and adhesive media after media adjustment

Bulk solids

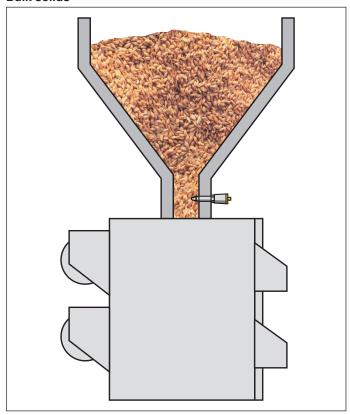

Fig. 4: Level switches in bulk solids storage

Many processes require bulk solids, granules and powdery substances.

The special level switch VEGAPOINT 31 is optimised for the special requirements in bulk solids. It also works, for example, with strong dust generation.

Advantages:

- Special level switch VEGAPOINT 31 for requirements in bulk solids
- Reliable point level detection even with dust generation
- Simple setup via Bluetooth adjustment

Pipelines

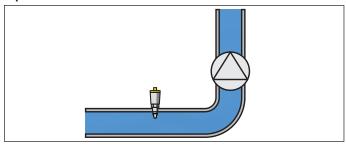

Fig. 5: Dry run protection in pipelines

In order, for example, to transport drinking water even to the remotest drinking water reservoir, pumping stations generate the required water pressure, which is constantly monitored by a pressure transmitter.

Since dry running usually leads to damage or failure of the pumps, a VEGAPOINT 21 level switch serves as dry run protection for the drinking water pumps.

Advantages:

- High plant availability, because wear and maintenance free
- Exact switching function independent of process condition
- Simple setup via Bluetooth adjustment

3 Instrument selection

VEGAPOINT 11

VEGAPOINT 11 is an ultra-compact, capacitive point level sensor with smallest installation dimensions.

It is suitable for the detection of water-based liquids.

The optional universal connection for hygiene adapters allows easy installation and meets the hygiene requirements of the food, beverage and pharmaceutical industries.

The small point level switch version has a compact stainless steel housing and is available in the electronic version transistor output with additional digital IO-Link communication.

VEGAPOINT 11 is adjustment free and has a clearly visible, coloured switching status indication that can be seen all around.

- From DK > 2
- From ½ thread
- · Universal connection for hygiene adapter
- Transistor output with IO-Link
- M12 x 1 plug
- Hygienic approvals

VEGAPOINT 21

VEGAPOINT 21 is a capacitive point level sensor with small installation dimensions for the detection of water-based liquids.

VEGAPOINT 21 is largely independent of medium properties and therefore adjustment-free. It has a clearly visible, all-round coloured switching status indication.

The optional universal connection for hygiene adapters allows easy installation and meets the hygiene requirements of the food, beverage and pharmaceutical industries.

The small point level switch version has a compact stainless steel housing and is available in the electronic version transistor output or as transistor output with additional digital IO-Link communication.

The sensor can be operated wirelessly via Bluetooth using a tablet or smartphone with an app. This allows you to set the switching behaviour, the application and many other parameters as required.

- From DK > 1.5
- From ½ thread
- Universal connection for hygiene adapter
- Transistor output
- IO-Link output
- Wireless adjustment
- M12 x 1 plug
- Valve block according to ISO 4400
- Ex and hygienic approvals

VEGAPOINT 23

VEGAPOINT 23 is a capacitive point level sensor with selectable length for the measurement of water-based liquids.

The tube extension of the point level switch is available up to a length of 1 m (39.4 in).

VEGAPOINT 23 is largely independent of medium properties and therefore adjustment-free. It has a clearly visible, all-round coloured switching status indication.

The optional universal connection for hygiene adapters allows easy installation and meets the hygiene requirements of the food, beverage and pharmaceutical industries.

The small point level switch version has a compact stainless steel housing and is available in the electronic version transistor output or as transistor output with additional digital IO-Link communication.

The sensor can be operated wirelessly via Bluetooth using a tablet or smartphone with an app. This allows you to set the switching behaviour, the application and many other parameters as required.

- Valve block according to ISO 4400
- Ex and hygienic approvals

VEGAPOINT 31

VEGAPOINT 31 is a capacitive point level sensor with small installation dimensions for the measurement of light bulk solids.

VEGAPOINT 31 is largely independent of medium properties and therefore adjustment-free. It has a clearly visible, all-round coloured switching status indication.

The optional universal connection for hygiene adapters allows easy installation and meets the hygiene requirements of the food, beverage and pharmaceutical industries.

The small point level switch version has a compact stainless steel housing and is available in the electronic version transistor output or as transistor output with additional digital IO-Link communication.

The sensor can be operated wirelessly via Bluetooth using a tablet or smartphone with an app. This allows you to set the switching behaviour, the application and many other parameters as required.

5 Mounting

Ambient conditions

The instrument is suitable for standard and extended ambient conditions acc. to DIN/EN/IEC/ANSI/ISA/UL/CSA 61010-1. It can be used indoors as well as outdoors.

Process conditions

Caution:

For safety reasons, the instrument must only be operated within the permissible process conditions. You can find detailed information on the process conditions in chapter "*Technical data*" of the operating instructions or on the type label.

Hence make sure before mounting that all parts of the instrument exposed to the process are suitable for the existing process conditions.

These are mainly:

- · Active measuring component
- Process fitting
- Process seal

Process conditions in particular are:

- Process pressure
- Process temperature
- Chemical properties of the medium
- Abrasion and mechanical influences

Switching point

In general, VEGAPOINT can be mounted in any position. The instrument must be mounted in such a way that the sensor is at the height of the requested switching point.

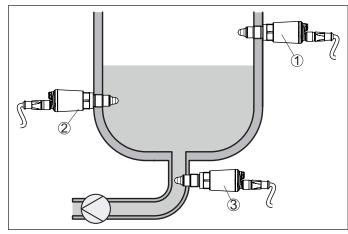

Fig. 6: Installation examples - VEGAPOINT 21

- 1 Upper level detection (max.) as overflow protection
- 2 Lower level detection (min.) as dry run protection
- 3 Dry run protection (min.) for a pump

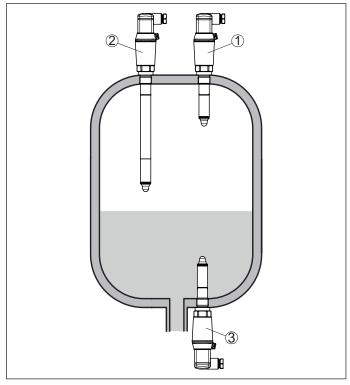

Fig. 7: Installation examples - VEGAPOINT 23

- 1 Upper level detection (max.) as overflow protection
- 2 Point level detection e.g. for a process switching point
- 3 Lower level detection (min.) as dry run protection

Note that the switching point varies depending on the type of medium and the mounting position of the sensor.

Adhesive products (VEGAPOINT 21, 31)

In adhesive and viscous media, the surfaces of the sensor should protrude into the vessel to avoid buildup. Therefore mounting bosses should not exceed a certain length.

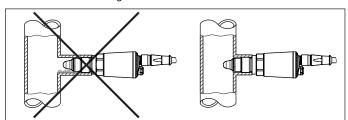

Fig. 8: Adhesive products

In horizontal pipelines, avoid mounting in the upper or lower area of the pipe.

In the upper part of the pipe cavities can form due to air inclusions.

Solids can settle in the lower pipe area. Both can lead to measurement errors.

In horizontal pipelines, lateral installation is therefore recommended.

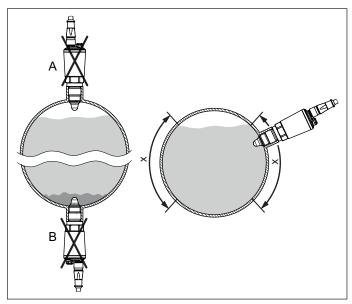

Fig. 9: Installation in horizontal pipelines

- Recommended mounting area
- Not recommended danger of air inclusions Not recommended Danger of buildup
- В

Adhesive products (VEGAPOINT 23)

Solids can settle in the lower tank area.

With adhesive and viscous media, the sensor should protrude into the

In case of lateral installation, an instrument version with tube extension can prevent unwanted detection of these deposits.

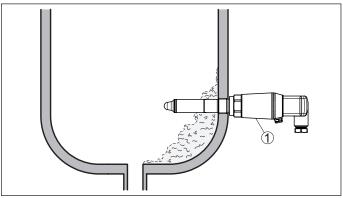

Fig. 10: Lateral installation - buildup

VEGAPOINT, laterally mounted

Inflowing medium

If VEGAPOINT is mounted in the filling stream, unwanted false measurement signals can be generated. For this reason, mount VEGAPOINT at a position in the vessel where no disturbances, e.g. from filling openings, agitators, etc., can occur.

6 Transistor output

Voltage supply

Note safety instructions

Always keep in mind the following safety instructions:

· Connect only in the complete absence of line voltage

Take note of safety instructions for Ex applications

In hazardous areas you must take note of the respective regulations, conformity and type approval certificates of the sensors and power supply units.

Voltage supply

Power the instrument via an energy-limited circuit (power max. 100 W) acc. to IEC 61010-1, e.g.

- Class 2 power supply unit (acc. to UL1310)
- SELV power supply unit (safety extra-low voltage) with suitable internal or external limitation of the output current

Keep in mind the following additional factors that influence the operating voltage:

- Lower output voltage of the power supply unit under nominal load
- Influence of additional instruments in the circuit (see load values in chapter "Technical data")

Connection cable

Use cable with round cross section. Depending on the plug connection, you have to select the outer diameter of the cable respectively so that the seal effect of the cable gland is ensured.

The instrument is connected with standard four-wire cable. If electromagnetic interference is expected which is above the test values of EN 61326-1 for industrial areas, shielded cable should be used.

- Valve plug ISO 4400, ø 4.5 ... 7 mm
- Valve plug ISO 4400 with IDC crimping technology, ø 5.5 ... 8 mm

Connection

Transistor output

We recommend connecting VEGAPOINT in such a way that the switching circuit is open when there is a level signal, line break or failure (safe state).

The instrument is used to control relays, contactors, magnet valves, warning lights, horns as well as PLC inputs.

For connection to binary inputs of a PLC.

VEGAPOINT 21, 23, 31 - T

7 Transistor output with IO-Link

Voltage supply

The data for power supply are specified in chapter "Technical data".

Power the instrument via an energy-limited circuit (power max. 100 W) acc. to IEC 61010-1, e.g.

- Class 2 power supply unit (acc. to UL1310)
- SELV power supply unit (safety extra-low voltage) with suitable internal or external limitation of the output current

Keep in mind the following additional factors that influence the operating voltage:

- Lower output voltage of the power supply unit under nominal load
- Influence of additional instruments in the circuit (see load values in chapter "Technical data")

Connection cable

The instrument is connected with standard four-wire cable. If electromagnetic interference is expected which is above the test values of EN 61326-1 for industrial areas, shielded cable should be used.

8 Adjustment

8.1 VEGAPOINT 11

The switching status of VEGAPOINT can be checked from outside (signal lamp).

8.2 VEGAPOINT 21, 23, 31

Local adjustment

The switching status of VEGAPOINT can be checked from outside (LED illuminated ring).

Wireless adjustment

The optionally integrated Bluetooth module enables in addition a wireless adjustment of VEGAPOINT via standard adjustment devices:

- Smartphone/tablet (iOS or Android operating system)
- PC/notebook with Bluetooth LE or Bluetooth USB adapter (Windows operating system)

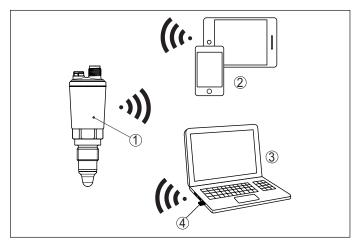

Fig. 13: Wireless connection to standard adjustment devices with integrated Bluetooth LE or alternatively Bluetooth USB adapter.

- 1 Sensor
- 2 Smartphone/Tablet
- 3 PC/Notebook
- 4 Bluetooth USB adapter

With the operating app you can change the parameters of the sensor and retrieve detailed diagnostic information.

These include, among other things:

- Switching function
- Application
- Switching outputs
- Switching and reset delay
- Display colour and brightness of the illuminated ring
- Units
- Simulation
- Sensor information
- Peak values
- Sensor status
