1.3 High temperatures

To protect the sensor from high temperatures caused by direct sunlight, the mounting bracket can optionally be equipped with a passive sun protection.

Check the local conditions (surface or ambient temperature).

Contact our specialists, if you are not sure.

2 Mounting with source container VEGASOURCE 31, 35

Operating instructions

Take note of the operating instructions of the corresponding sensor MINITRAC and the source holder.

Mounting brackets for vertical mounting

Take note of the following mounting instructions:

- Mount the bracket first, then the sensor and the source holder
- The arrow cutouts in the clamp (source container side) and in the transport lug of the source holder must point in the same direction (A) after mounting
- Make sure that the two clamps (5 and 8) of the bracket are parallel to each other. Do this by measuring the distances between the clamps
- To avoid injuries, shorten the threaded rods (1) of the brackets to a suitable length after mounting

Vertical sensor mounting

Mount the bracket according to the following assembly drawing:

Fig. 4: Mounting bracket with vertically mounted sensor

- 1 Threaded rod M10 x 620 mm (M10 x 24.41 in), (4 pieces)
- 2 Hexagon nut M16 (4 pieces)
- 3 Hexagon nut M10 (16 pieces)
- 4 Washer for M16 (4 pieces)
- 5 Clamp, Source holder side (1 piece)
- 6 Washer for M10 (8 pieces)
- 7 Hexagon screw M8 (2 pieces)
- 8 Clamp, Sensor side (MINITRAC), (1 piece)
- A Arrow cutouts of the clamp and eyebolt point in the same direction

1. Make sure that the two clamps of the bracket are parallel to each other. Do this by measuring the lateral distances between the clamps.

2. Tighten the nuts of the threaded rod evenly. Keep the tube diameter and the stability of the tube material in mind. Avoid deformation of the tube through an overtightening of the mounting bracket.

If you have the impression that the tube cannot permanently carry the weight of the mounting bracket, sensor and source container, mount a suitable support below the mounting bracket.

3. Shorten the threaded rods after mounting to avoid injuries.

Install a protective grid

If there are gaps or empty spaces around the installation, provide protective fences or grids to keep hands away from the dangerous area. Such areas must be marked accordingly.

Install a protective grid on both sides of the mounting bracket. A sheet metal cover or a correspondingly shaped plastic sheet can also be used.

Corresponding holes for screws of size M5 are provided on the mounting bracket.

Mount the protective grid according to the following assembly drawing:
