Information:

This quick setup guide enables quick setup and commissioning of your instrument.

You can find supplementary information in the corresponding, more detailed Operating Instructions Manual as well as the Safety Manual that comes with instruments with SIL qualification. These manuals are available on our homepage.

**Operating instructions VEGAPULS 66 - HART and power pack:
Document-ID 40933**

Editing status of the quick setup guide: 2021-06-10

1 For your safety

1.1 Authorised personnel

All operations described in this documentation must be carried out only by trained, qualified personnel authorised by the plant operator.

During work on and with the device, the required personal protective equipment must always be worn.

1.2 Appropriate use

The VEGAPULS 66 is a sensor for continuous level measurement. Due to the integrated accumulator the instrument is particularly suitable as a portable measuring system or test sensor for special applications.

You can find detailed information about the area of application in chapter " *Product description*".

Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.

1.3 Warning about incorrect use

Inappropriate or incorrect use of this product can give rise to application-specific hazards, e.g. vessel overfill through incorrect mounting or adjustment. Damage to property and persons or environmental contamination can result. Also, the protective characteristics of the instrument can be impaired.

1.4 General safety instructions

This is a state-of-the-art instrument complying with all prevailing regulations and directives. The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for the trouble-free operation of the instrument. When measuring aggressive or corrosive media that can cause a dangerous situation if the instrument malfunctions, the operator has to implement suitable measures to make sure the instrument is functioning properly.

The safety instructions in this operating instructions manual, the national installation standards as well as the valid safety regulations and accident prevention rules must be observed by the user.

For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden. For safety reasons, only the accessory specified by the manufacturer must be used.

To avoid any danger, the safety approval markings and safety tips on the device must also be observed.

The low transmitting power of the radar sensor is far below the internationally approved limits. No health impairments are to be expected

with intended use. The band range of the measuring frequency can be found in chapter " *Technical data*".

1.5 EU conformity

The device fulfils the legal requirements of the applicable EU directives. By affixing the CE marking, we confirm the conformity of the instrument with these directives.

The EU conformity declaration can be found on our homepage.

1.6 NAMUR recommendations

NAMUR is the automation technology user association in the process industry in Germany. The published NAMUR recommendations are accepted as the standard in field instrumentation.

The device fulfils the requirements of the following NAMUR recommendations:

- NE 21 – Electromagnetic compatibility of equipment
- NE 43 – Signal level for fault information from measuring transducers
- NE 53 – Compatibility of field devices and display/adjustment components
- NE 107 – Self-monitoring and diagnosis of field devices

For further information see www.namur.de.

1.7 Radio license for Europe

The instrument was tested according to the latest issue of the following harmonized standards:

- EN 302372 - Tank Level Probing Radar

It is hence approved for use inside closed vessels in countries of the EU.

Use is also approved in EFTA countries, provided the respective standards have been implemented.

For operation inside of closed vessels, points a to f in annex E of EN 302372 must be fulfilled.

1.8 Radio license for USA

This approval is only valid for USA. Hence the following text is only available in the English language.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause interference, and
- This device must accept any interference, including interference that may cause undesired operation of the device

This device is approved for unrestricted use only inside closed, stationary vessels made of metal, reinforced fiberglass or concrete.

Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate this equipment.

1.9 Environmental instructions

Protection of the environment is one of our most important duties. That is why we have introduced an environment management system with the goal of continuously improving company environmental protection. The environment management system is certified according to DIN EN ISO 14001.

Please help us fulfil this obligation by observing the environmental instructions in this manual:

- Chapter " *Packaging, transport and storage* "
- Chapter " *Disposal* "

2 Product description

2.1 Configuration

Type label

The type label contains the most important data for identification and use of the instrument:

Fig. 1: Layout of the type label (example)

- 1 Instrument type
- 2 Product code
- 3 Approvals
- 4 Power supply and signal output, electronics
- 5 Protection rating
- 6 Measuring range
- 7 Process and ambient temperature, process pressure
- 8 Material wetted parts
- 9 Hardware and software version
- 10 Order number
- 11 Serial number of the instrument
- 12 Data matrix code for VEGA Tools app
- 13 Symbol of the device protection class
- 14 ID numbers, instrument documentation
- 15 Reminder to observe the instrument documentation

Serial number - Instrument search

The type label contains the serial number of the instrument. With it you can find the following instrument data on our homepage:

- Product code (HTML)
- Delivery date (HTML)
- Order-specific instrument features (HTML)
- Operating instructions and quick setup guide at the time of shipment (PDF)
- Order-specific sensor data for an electronics exchange (XML)
- Test certificate (PDF) - optional

Move to "www.vega.com" and enter in the search field the serial number of your instrument.

Alternatively, you can access the data via your smartphone:

- Download the VEGA Tools app from the "Apple App Store" or the "Google Play Store"
- Scan the DataMatrix code on the type label of the instrument or
- Enter the serial number manually in the app

3 Mounting

3.1 Mounting instructions

Mounting

1. Distance from the vessel wall > 200 mm, the antenna should protrude > 10 mm into the vessel

Fig. 2: Distance of the antenna to the vessel wall/vessel ceiling

2. Note min. socket diameter depending on the socket length
For further information see chapter "Mounting".

4 Connecting to power supply

4.1 Connection of the battery charger

We recommended charging the integrated accumulator completely before setting up the instrument. You can find the charging time in chapter " *Technical data*".

The battery charger is plugged into a socket in the supply room, see chapter " *Wiring plan*".

The LEDs in the supply room show the charging process and condition of the accumulator, see chapter " *Wiring plan*".

4.2 Wiring plan

Supply room

Fig. 3: Supply room

- 1 Internal connection of the socket for the battery charger
- 2 Mode switch
- 3 LED green, charging process
- 4 LED yellow, charging status
- 5 Socket for the battery charger

The mode switch enables the selection of the following modes:

- 0 = sensor off, LEDs show the accumulator status
- 1, 2 = sensor off, LEDs off
- 3 = sensor on for 1 hour after pressing a key (delivery status)
- 4 = sensor permanently on, switching on/off via button
- 5 = sensor is switched on every 30 minutes for 3 minutes
- 6 = sensor is switched on every hour for 3 min.
- 7 = sensor is switched on every 6 hours for 3 minutes
- 8 = sensor is switched on every 12 hours for 3 minutes
- 9 = sensor is switched on every 24 hours for 3 minutes

The green LED characterizes the charging process:

- LED flashes = Accumulator is charging
- LED lights = accumulator is full, battery charger should be unplugged (accumulator life time)

After pressing the key or changing the mode the yellow LED shows the accumulator status for approximately 10 s as follows:

- LED lights = accumulator is full
- LED flashes = accumulator should be charged

- LED off = accumulator is empty

5 Set up with the display and adjustment module

5.1 Insert display and adjustment module

The display and adjustment module can be inserted into the sensor and removed again at any time. You can choose any one of four different positions - each displaced by 90°. It is not necessary to interrupt the power supply.

Proceed as follows:

1. Unscrew the housing lid
2. Place the display and adjustment module on the electronics in the desired position and turn it to the right until it snaps in.
3. Screw housing lid with inspection window tightly back on

Disassembly is carried out in reverse order.

The display and adjustment module is powered by the sensor, an additional connection is not necessary.

Fig. 4: Installing the display and adjustment module in the electronics compartment of the single chamber housing

Fig. 5: Installing the display and adjustment module in the double chamber housing

- 1 In the electronics compartment
- 2 In the connection compartment

Note:

If you intend to retrofit the instrument with a display and adjustment module for continuous measured value indication, a higher lid with an inspection glass is required.

5.2 Parameter adjustment

Set parameters

1. Go to the menu "Setup" via the display and adjustment module.

2. In the menu item "Medium" you select the medium of your application, for example "Aqueous solution".

3. Select in the menu item "Application" the vessel, the application and the vessel form, for example, storage tank.

4. Carry out the adjustment in the menu items "Min. adjustment" and "Max. adjustment".

Parameterization example The radar sensor measures the distance from the sensor to the medium surface. For indication of the real level, an allocation of the measured distance to the percentage height must be carried out.

Fig. 6: Parameterization example

- 1 Min. level = max. measuring distance
- 2 Max. level = min. measuring distance

For this adjustment, the distance is entered when the vessel is full and nearly empty. If these values are not known, an adjustment with other distances, for example, 10 % and 90 % is also possible. Starting point for these distance specifications is always the seal surface of the thread or flange.

Diagnostics - Echo curve memory

The function "Echo curve memory" makes it possible to save the echo curve at the time of setup. This is generally recommended, and it is absolutely necessary if you want to use the Asset Management functions. If possible, the curve should be saved with a low level in the vessel.

With the adjustment software PACTware and a PC, a high resolution echo curve can be displayed and used to recognize signal changes during operation. In addition, the echo curve of setup can be displayed in the echo curve window and compared with the current echo curve.

Additional settings - False signal suppression

The following circumstances cause interfering reflections and can influence the measurement:

- High mounting nozzles
- Vessel internals such as struts
- Agitators

- Buildup or welded joints on vessel walls

Note:

A false signal suppression detects, marks and saves these false signals to ensure that they are ignored in the level measurement.

This should be done with the lowest possible level so that all potential interfering reflections can be detected.

Proceed as follows:

1. Select with [\rightarrow] the menu item "False signal suppression" and confirm with [OK].

2. Confirm 3-times with [OK] and enter the actual distance from the sensor to the product surface.
3. All interfering signals in this range are detected by the sensor and stored after being confirmed with [OK].

Note:

Check the distance to the medium surface, because if an incorrect (too large) value is entered, the existing level will be saved as a false signal. The level would then no longer be detectable in this area.

If a false signal suppression has already been saved in the sensor, the following menu window appears when selecting "False signal suppression":

Delete: An already created false signal suppression will be completely deleted. This is useful if the saved false signal suppression no longer matches the metrological conditions in the vessel.

Extend: is used to extend an already created false signal suppression. This is useful if a false signal suppression was carried out with too high a level and not all false signals could be detected. When selecting "Extend", the distance to the medium surface of the created false signal suppression is displayed. This value can now be changed and the false signal suppression can be extended to this range.

5.3 Menu overview

Setup

Menu item	Parameter	Default setting
Measurement loop name		Sensor
Medium		Liquid Water based
Application		Storage tank
Vessel shape	Vessel top	Dished form
	Vessel bottom	Dished form
Vessel height/ Measuring range		35 m
Max. adjustment		0,000 m(d) 100.00 %
Min. adjustment		35 m 0.00 %
Damping	Integration time	0.0 s
Current output mode	Output characteristics	4 ... 20 mA
	Failure mode	≤ 3.6 mA
Current output - Min./Max.	Min. current	3.8 mA
	Max. current	20.5 mA
Lock adjustment		Released

Display

Menu item	Default setting
Language	Order-specific
Displayed value	Filling height in %
Backlight	Switched on

Diagnostics

Menu item	Parameter	Default setting
Device status		-
Peak value indicator	Distance	-
Electronics temperature	Temperature	-
Measurement reliability		-
Simulation		Percent
Curve display	Echo curve	-
	False signal suppression	-

Menu item	Parameter	Default setting
Echo curve memory		-

Additional adjustments

Menu item	Default setting
Instrument units	Distance in m Temperature in °C
False signal suppression	-
Linearisation	Linear
PIN	-
Date/Time	Actual date/Actual time
Reset	-
HART mode	Address 0
Copy instrument settings	-

Info

Date of manufacture	Date
Instrument features	Order-specific characteristics

6 Set up with smartphone/tablet, PC/notebook via Bluetooth

6.1 Preparations

Activate Bluetooth

Make sure that the Bluetooth function of the display and adjustment module is activated. For this, the switch on the bottom side must be set to "On".

Fig. 7: Activate Bluetooth

1 Switch

On = Bluetooth active

Off = Bluetooth not active

Change sensor PIN

The security concept of Bluetooth operation absolutely requires that the default setting of the sensor PIN be changed. This prevents unauthorized access to the sensor.

The default setting of the sensor PIN is "0000". First of all you have to change the sensor PIN in the adjustment menu of the sensor, e.g. to "1111":

1. In the adjustment menu, go to "Additional adjustments", "PIN"

Note:

The menu item "PIN" is only displayed if in the menu "Setup", "Lock/Unlock adjustment" the adjustment is released.

2. Change sensor PIN

Note:

Bluetooth access can only be established if the current sensor PIN differs from the default setting "0000". It is possible both when the PIN is deactivated and when it is activated (adjustment menu "Setup", "Lock/Unlock adjustment").

6.2 Connecting

Preparations

Smartphone/Tablet

Start the adjustment app and select the function "Setup". The smartphone/tablet searches automatically for Bluetooth-capable instruments in the area.

PC/Notebook

Start PACTware and the VEGA project assistant. Select the device search via Bluetooth and start the search function. The device automatically searches for Bluetooth-capable devices in the vicinity.

Connecting

The message "Instrument search running" is displayed. All devices found are listed in the operating window. The search is automatically continued continuously.

Select in the device list the requested device. The message "Connecting" is displayed.

Authenticate

For the first connection, the operating device and the sensor must authenticate each other. After successful authentication, the next connection functions without authentication.

For authentication, enter in the next menu window the 4-digit sensor PIN.

6.3 Sensor parameter adjustment

The sensor parameterization is carried out via the adjustment app on the smartphone/tablet or the DTM on the PC/notebook.

App view

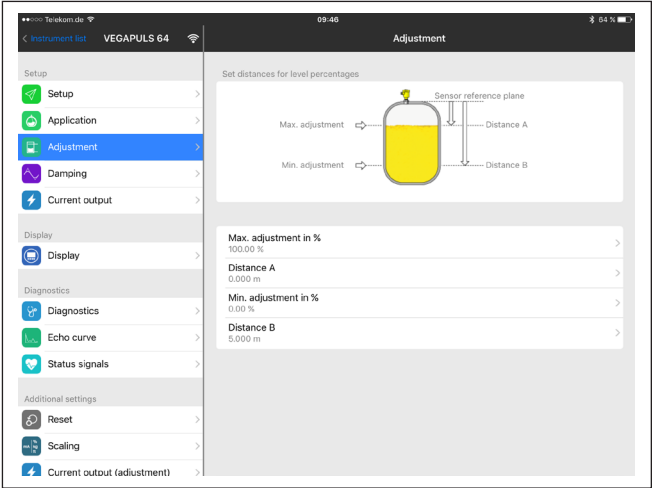

Fig. 8: Example of an app view - Setup sensor adjustment

7 Supplement

7.1 Technical data

Note for approved instruments

The technical data in the respective safety instructions which are included in delivery are valid for approved instruments (e.g. with Ex approval). These data can differ from the data listed herein, for example regarding the process conditions or the voltage supply.

All approval documents can be downloaded from our homepage.

External battery charger

Mains voltage	100 ... 240 V AC
Output voltage	24 V DC
Max. output current (short-circuit proof)	500 mA
Load current limitation	70 mA
DC plug (inside plus, outside minus)	2.1 mm

Integrated accumulator

Type	Lithium ions
Voltage	14.8 V
Accumulator capacity	4.7 Wh
Charging period from 0 % to 100 %	approx. 4 h
Operating time after 10 minutes charging of 0 %	> 3 h
Operating time in mode 4 (sensor permanently on) with completely charged accumulator	> 60 h
Temperature range	
– Charge accumulator	0 ... +45° C (+32 ... +167 °F)
– Accumulator operation	-20 ... +60° C (-4 ... +140 °F)
Temperature derating accumulator capacity	
– +25° C (+77 °F)	100 %
– -10° C (+14 °F)	50 %

Printing date:

VEGA

All statements concerning scope of delivery, application, practical use and operating conditions of the sensors and processing systems correspond to the information available at the time of printing.
