

Reliable

Reliable content measurement in the fire water tank

Cost effective

Maintenance-free operation through non-contact measurement

User friendly

Simple mounting and setup

Storage tanks for fire water

Level measurement in storage tanks for fire water

To ensure fire safety, power plants are required to have an adequate supply of extinguishing water on hand for the fire brigade. The water is usually provided through a central fire water main. To make sure there is always a minimum supply on site, trustworthy level measuring instruments are deployed in the fire water

VEGAPULS 6X

Non-contact radar level measurement in liquids

- Simple installation and setup on existing tanks without emptying the container beforehand
- High measurement certainty, because condensation does not affect the measuring results
- Robust design ensures maximum operational reliability, even with large distances up to 30 m
