

Reliable

Reliable measurement ensures sufficient stocks

Cost effective

Lower production costs thanks to optimal stocking of animal feed

User friendly

Continuous replenishment through automatic ordering from the supplier

Animal feed silo

Level measurement in animal feed silos

In the agricultural industry, animal feed is usually stored in tall, slim silos. To ensure that there is always enough animal feed in stock, a reliable level measurement combined with wireless data transmission is a great business asset. A fully automatic notification of resupply requirement can trigger the sending of an order to the animal feed supplier.

VEGAPULS Air 42

Autarkic level measurement of the animal feed silo with radar

- Measurement from the outside, right through container walls, possible thanks to 80-GHz radar technology
- Reliable measurement despite intense dust generation
- Easy installation thanks to independent power supply and wireless technology

VEGA Inventory System

Software for data acquisition and visualisation of level data

- Easy access to live data around the clock
- Accurate, up-to-date information on tank levels
- Simplified management through a wide range of functions
- Fully automatic and timely notification of resupply requirements
- Increased security of supply
